AWS CLOUD INSTITUTE

Build an internal pipeline of cloud talent by reskilling your non-technical employees

AWS Cloud Institute, virtual cloud skills training program, enables employees at your company - with little to no technical background - to reskill and launch their career in cloud in as little as one year.

You're investing in the AWS Cloud, modernizing applications and workloads, and reimagining how you work and do business. Now deepen and diversify your early-career cloud talent pool by tapping into the potential of non-technical employees, who bring hands-on, relevant experience in serving your customers and managing business operations. Give energy and momentum to your ongoing cloud journey, and create career pathways that propel your employees – and your company – into the future.

AWS Cloud Institute is designed by AWS experts and informed by companies looking for in-demand skills and relevant experience. Participating employees from your company will solve real-world business problems while curating a portfolio of demonstrated work that illustrates hands-on AWS experience and practical knowledge.
